

Services of LLS ROWIAK LaserLabSolutions

The LLS ROWIAK LaserLabSolutions laser systems are designed for cutting and structuring cells, tissue and materials from a submicrometer to a macroscopic scale. Take advantage of our expertise as developers in laser technologies. We offer service, support and development in following fields:

Cutting, Microstructuring and Imaging Service

We offer cutting, microstructuring and imaging service of your samples with both systems, TissueSurgeon and CellSurgeon. This can include full histology service, imaging or small experiments. You send your samples, we prepare them with all options of our systems. This service is for routine samples and if your sample throughput is not high enough to buy a system.

Rent a Lab

You want to perform experiments on your own with the help of our expertise (and beyond)? You need to observe important steps of preparation and you can only handle your samples on your own? Or you just want to be present when your samples are treated? You can rent our lab and perform your experiments without moving the LLS ROWIAK LaserLabSolutions systems to your lab. We also offer training that you can work on your own, or in cooperation with members of our staff!

Rent a System

Your experiments require further treatment with devices from your lab that can't be moved? Or you want to test our systems working in your own lab environment? We offer to rent the system to run it in your lab including transport, set-up, training and support!

Process and Application Development

You have an idea of a new way to process your samples but you miss a technology? Ask us to develop your certain application. As we are experts in developing laser based system, we offer customized applications and systems designed for you. Think about the impossible!

Technology Development and Consulting Services

Your experiment or application cannot be performed with existing systems? Your own (laser based) imaging systems need an upgrade to be up to date of technology? Ask for our consulting service to get the best high-end technology.

Disposables

Our technologies show new ways of sample handling. To get the best results, new disposables are developed and offered by our company to give best results for you.
